

# An Elementary Treatise on Dynamics; Containing Applications to Thermodynamics, with Numerous Examples

Filesize: 6.91 MB

## ***Reviews***

*An exceptional publication as well as the font employed was exciting to see. it was actually writtern extremely flawlessly and helpful. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

***(Dominic Collins)***

## AN ELEMENTARY TREATISE ON DYNAMICS; CONTAINING APPLICATIONS TO THERMODYNAMICS, WITH NUMEROUS EXAMPLES

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: .having the acceleration-centre as centre. 19. Find the points of the body for which the acceleration normal to the path described by the point is zero. Take the centre of rotation as origin of  $fij$ ; any point is describing a circle round it; hence the line joining the origin to 71 is the normal to the path of the latter; and if  $N$  be the normal acceleration, and  $r$  the distance from the instantaneous centre of rotation, Hence, at any instant, the points for which  $N=0$  lie on the circle?  $+ - = SV$ . This circle passes through the instantaneous centre of rotation, touches the curve  $G$ , and has a radius  $= R$ . For the reason stated in Ex. 21 it is called the circle of inflexions.--Differential Calculus, Art. 290. 20. Determine the points of the system for which the acceleration along the path is zero. They lie on a circle whose equation, referred to the centre of rotation as origin, is  $(+ 1, ) + -, .B = 0$ . This circle passes through the instantaneous centre of rotation and cuts the curve  $C$  orthogonally. The theorems of the last two examples are due to Bresse (Journal de Vecole poly technique, t. xx.). 21. Determine at any instant the points of the hody which are passing over points of inflexion on their respective paths. v2 They are the points having no normal acceleration (Ex. 19); for, as--is  $f$  then zero, and  $v$  not...
