Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is writter in simple words and phrases rather than difficult to understand. You will not really feel monotony at at any time of your time (that's what catalogs are for relating to in the event you question me).
(Robyn Nolan)

Book Condition: New. Publisher/Verlag: Springer, Berlin | An Introduction to the Biology of Disease | In tracing their origin and their fate, the beginning and the end of their environment, humans have often been guided by curiosity. Such concern has helped man to discover, among other things, the structure of the universe from star to atom and the evolution of life from unicellular organism to human being. The study of disease is unique. Although it may have been in spired by the curiosity of a few, it has always been the concern of all, because preventing or curing disease has meant survival not only of individuals, but of entire nations, not only of humans, but of fellow living creatures. If greed, force, religion, and language have been major causes of wars, diseases, more than arms, have often decided the outcome of battles and thereby have woven the pattern of history. For millennia, a large fraction of the human race believed that disease expressed the wrath of God(s) against individuals or societies. Therefore, only priests or priestesses, kings, and queens were endowed with the power of healing. In the West, Hippocrates is credited for exorcising this concept of disease and for objectively describing and cataloguing them. The contributions of Greek physicians to Western medicine made possible more accurate diagnoses and prognoses. | 1 The Concept of Disease and Its History.- Prehistoric Times.- Egypt, Greece, and Rome.- Medieval Times.- The Foundation of Modern Pathology.- The Renaissance.- The Great Schools of Medicine in the 18th and 19th Centuries.- Cellular Pathology.- The Origins of Chemical Pathology.- Alchemy.- Renaissance Chemistry and Medicine.- Discovery of Oxygen and Respiration.- The 19th Century.- 2 Development of Existing Knowledge.- Gene Expression.- Cell Structure.- Molecular Organization.- Nucleus.- Cytoplasm.- Endoplasmic Reticulum.- The Cytosol and Glycolysis.- Mitochondria and Aerobic Pathways.- Other Cytoplasmic...
